

INNOVATIVE TECHNOLOGIES ARE THE DRIVING FORCE OF EDUCATIONAL DEVELOPMENT

**Sotvoldieva Mokhinur Khazratullo qizi,
Andijan State University**

1st stage graduate student of Folklore studies and dialectology

Annotation: Today, helping young people to find a worthy place in society is one of the important and priority tasks facing developing countries today. At the core of them, the field of education occupies the main place. In this research, we will discuss the future of the state directly depends on educated youth and their quality education, the stages of development of education in our country.

Keywords: education, free socialization, innovation, students, scientists and entrepreneurs, geology, mathematics, physics, agriculture, chemical industry, health, education, 3D modeling and other areas.

It is well known that today's young people receive education in several specialties, which is important for them to find a worthy place in society, start their own business, and implement new production ideas. So, today's education of young people, who are the creators of the future, is an important factor that determines our tomorrow. That is why all conditions are being created in Uzbekistan to ensure employment of young people, to get quality education and to fully demonstrate their talents. In addition, their social and legal protection is also a constant focus.

It can be seen that the issue of youth is one of the most priority areas of state policy. Uzbekistan is a country of happy young people, about 64% of the population of our country are young people, that is, people under 30 years of age. Of course, if we bear in mind that this is a huge responsibility for our state, it requires a lot of attention and care. Because now more than half of Uzbekistan's labor resources are young people. It is a clear fact that in the future every third leader will be young people. In this day, the problems of youth education are a global issue for almost all countries. Regarding these topics, the President of the Republic of Uzbekistan Sh.Mirziyoyev said at the 72nd session of the UN General Assembly: "The youth of today's world is the largest generation in the history of mankind in terms of number, because they make up 2 billion people.

It is fair to say that the science of pedagogy is independent in the Republic of Uzbekistan theoretical foundations of the continuous education system, laws and principles, specific directions of education is a science that teaches the stages of historical development. Pedagogy in the Republic of Uzbekistan is recognized as a priority area of IFM. Pedagogy, like other subjects, belongs to everyone serves to achieve social maturity. It is based on the laws of nature and the development of society and it develops as a social science. Therefore, it is a philosophy, such subjects as history, economics, psychology, sociology, ethics and aesthetics inextricably linked with it.

Among the global trends such as the internationalization of education, the international mobility of students, the rapid change of the educational program, the issue of ensuring the quality of education is gaining special importance. Modern socio-economic conditions and the high demands placed on the spiritual, moral, intellectual and professional potential of future specialists put the task of training quality personnel who can meet international requirements before educational institutions. In order to fulfill these tasks, it is necessary to use innovative pedagogical technologies in education. However, modern trends in the educational system, especially the innovative pedagogical technologies used in the educational system of developed foreign countries, are being relatively slowly assimilated.

In the educational process, teaching using new innovative techniques and technologies, conducting training using laboratory rooms equipped with the latest techniques, providing information about the latest innovations in the specialty, for example, in the field of chemistry, giving examples from the world experience motivates to educate students in the spirit of innovation.

The future and well-being of our planet depends on how our children grow up to be human beings. Therefore, today, the main task of us teachers-coaches is to create the necessary conditions for young people to show their potential, to carry out explanatory work to prevent the spread of the idea of violence - the "virus", to provide social support to the young generation, to protect their rights and interests. We believe that it is necessary to develop multilateral cooperation. That's why young people have always been recognized as an active layer of society. Even during the Eastern Renaissance, the role of youth in the renewal of society was incomparable.

In this regard, this stratum, which is constantly forming, requires constant guidance and support... This means that the state should take measures aimed at creating optimal conditions and opportunities for the free socialization of young people in the interests of the country and effective expression of themselves, as well as supporting young people. The system of activities refers to the state policy regarding youth. Poet O'.Khaydarov said that in an interview with the mass media - "What our future will be like, renewal and changes will depend on the attention we pay to our patriotic youth today.

It is one of our main tasks to educate them to be selfless, patriotic, intellectually and physically perfect. " By the way, this is the truth. Measures to create suitable conditions for young people who do not work or study anywhere, provide them with comprehensive support, guide them to the profession and ensure their employment, and encourage their initiatives have reached a new level in recent years. Tomorrow, a peaceful life will directly depend on the perception, worldview, knowledge and skills of our growing youth. Therefore, our government always considers our desire to learn as a priority. In particular, the Law of the Republic of Uzbekistan "On State Policy Regarding Youth" means that the legal guarantees of the rights and interests of young people are getting stronger in Uzbekistan.

New innovative technologies are being introduced for our education, which serves to further increase the number of talented people among young people. As, in today's world, the number of rapidly developing countries due to the introduction of innovative development models, the export of advanced ideas, "know-how" and "smart" technologies is increasing. We young people know very well that innovation means the future.

We will start building our great future based on innovative ideas. We did not choose to move to the path of innovative development and digital economy for nothing. Because in today's fast-paced world, who wins? The country that relies on new thought, new idea, innovation will win. As an example, I can say that in Uzbekistan, young men and women with their own ideas and projects are supported at the ministerial level, and various competitions are organized for them.

Young people are showing their talent and potential in big technological development marathons like "Start-up", "Techno Ways". He has become a winner of grants and is turning his developments into useful devices. In addition, the "Youth Academy" was established in my country. In a short time, the structure has become a space that unites talented young people with innovative projects and ideas, students, scientists and entrepreneurs under the age of 40, and encourages them in every way. Young inventors work here on one of 4 platforms: "Idea Generators", "Startups", "Business Representatives" and "Future Academics". The Academy has about 2,000 members. They have been implementing their projects in geology,

mathematics, physics, agriculture, chemical industry, health, education, artificial intelligence, robotics and mechatronics, programming, 3D modeling and other areas.

Among the members, there are many active and enterprising teams that contribute to the development of a specific field by implementing their innovative and practical developments. Also, "The development of elements of creativity in young people through our national values and the principles of national tolerance, the long-standing traditions, culture, traditions, national holidays, rich, ancient heritage of our people have their special place and importance.

Based on the formation and strengthening of national pride and national pride in young people, their social it is necessary to pay special attention to increasing their activity. In the current globalization process, we can clearly say that only young people who are disciplined, responsible, patient, faith-believing, tolerant, socially active, enterprising and possessing such noble qualities can be the creators of the future" - These ideas presented on the official page of the university of World Economy and diplomacy in the social network are today's demand. Today, there are many talented people among the youth, who make up 60% of the population of my country. At the heart of their all-round support, the main criterion is the education of independent individuals who can take a worthy place in our country and the world arena with their own ideas.

In conclusion, such young people will not only build a peaceful future of their country, but also contribute to the development of world civilization with their high level of intelligence and their own potential. So, young people who are enjoying the country are the builders of our future.
