Annotation: We need to create our bright future with quality education which gives us numerous opportunities. Because talented young people are the founder of the country's bright future.

Key words: education, young peopl, development, knowledge, quality, government, aim, institutes, increase.

Education is the most important tool for the betterment of humanity as well as to develop modernization in civilization. In every government education is considered to be the most essential pillar that holds whole nation together and leads the state towards ultimate success. Education is at the heart of both personal and community development; it's mission is to enable each of us, without exception , to develop all our talents to the full and to realize our creative potentiality , including responsibility for our own lives and achievement of our personal aims. Quality education provides the outcomes needed individuals , communities and societies to prosper. People learn basic norms, rules and values of society through education. Moreover, high quality education enables us to lead a successful life, enhances our intelligence, skills, knowledge , and bring positive changes in our life. We need good doctors, good engineers, good lawyers and good teachers after all good citizens one only ensuring availability of quality education.

In order to increase the quality of education in Uzbekistan, the name of year was also named "The year of human care and quality education " otherwise, if the quality does not change , the attention does not change either. Achievements will be ours, only knowledge is needed. Whatever you call knowledge, each of us should look back and never forget that " we are the children of great ancestors" said that Sh. Mirziyoyev. [1] Young people are the founders of the future of every country, they need quality education and comforts for them to be the most advanced in every field. Nowadays, our developing country creates wide opportunities for young people. We can clearly see this in the President's political decisions about youth.

The youth policy is the priority direction of the state activity of the Republic of Uzbekistan and its goal is social and economic development of young people in order to fully realize their creative talent in the intersts of society. Consist of creating legal and organizational conditions and guaranteeing them. The state provides special support to talented young people. In the Republic of Uzbekistan, state organizations and public associations must assist in identifying talented young people and in their creative development for this purpose, state institutions and public assosiations provided with material technical bases in the Republic of Uzbekistan to search for, protect and support talented young people in the field of science and technology, economy, management, art and commisions operate . Measures to support talented young people are provided with money from republican and l ocal budgets, as well as other sources.[1]

More than 60 percent of the population of our country are young people. Naturally, our state pays special attention to the thoughts, problems and hopes of this layer. In recent years, significant reforms have been implemented in the national education system. These changes can be seen in: [3]

Preschool education system is changing radically our kindergartens about 10 thousand schools , pedagogical institutes , pedagogical colleges and etc. Coverage of pre-school education was approximately 17-18 percent. By the end of 2021 it is expected the coverage of preschool education will reach 65%, and at the end of 2023, it will reach 75%, an additional 2,000 non-state kindergartens will be established, and the share of the private sector will reach 25%. In order to fundamentally improve school education, 30 new schools were built in 2021, 320 schools were repaired, the material and technical base was improved, and 2 trillion soums were allocated from the budget. In order to fundamentally improve the quality of education, first of all, work was carried out to adapt educational programs, methodological manuals for teachers and teachers to advanced international criteria. [2]

In the petition, special attention is paid to the need to create comprehensive and understandable textbooks for the development of analytical and creative thinking skills of children. In this regard, instead of the state education standard, the "National Curriculum" was introduced in the primary classes based on advanced foreign experience, which does not overload the child. It was ensured that the quality of education in comprehensive schools was high both in the capital and in remote villages. It was envisaged that teachers who go to a remote school in another district and teach will be paid 50 percent per month, and 100 percent if they go to work in another region. In 2021, 10 presidential schools, 197 schools specializing in chemistry and biology, mathematics, and information technology began their activities . [2,4]
