needs analysis, English for Specific Purposes (ESP), direct method, indirect methods, unstructured interviews, learning styles, needs, wants, lacks

ANNOTATION

This article is based on Needs Analysis of the third-year students who are studying in the direction of Hotel and Tourism Management in Kokand University. The field of Tourism is now widely considered as one of the most important languages in discourse of tourism, serving as the basis for forming and developing worldwide professional tourism relationships throughout the globe. For teaching English to tourism students, it is not required a strictly set policy, however, various syllabus or curriculum based on particular field of Tourism can be employed in other institutions to assist the students to achieve their intended goals. In order to know the needs of students, direct and indirect approaches as well as unstructured interview, writing and a questionnaire are applied.

Introduction. Berwick (1989) states that NA may be done in a variety of forms, that are characterized as both deductive and inductive. The main prevalent strategy is questionnaire-based surveys, that allow researchers construct a character of our students' requirements, shortages, goals, cognitive abilities, and approaches while also making students informed of wants and interests as well as needs. Richard believes (1992) that the procedure of identifying the necessities that a student or entire class deserve languages and prioritizing those requirements is known as NA in instructing the international languages. Needs analysis can be main phase for the design of ESP and applied in various strategies.

The work aims to present the procedure of NA (needs analysis) among 19 students who are currently studying in the field of Hotel and Tourism Management of Kokand University (KU) which was established in 2019, 17th August.

The learners in this Tourism course can interact or speak about daily life topics which are common. They desire to acquire English for being fluent, accurate and knowledgeable while communicating with others as well as tourists utilizing important and appropriate terminologies, though. As their field is Hotel and Tourism Management, the ESP course is needed for being well qualified managers.

Methodologies for Needs Analysis. It is significant to determine the students' needs, wants, interests and lacks to enhance the ESP lessons for tourism students. Rhonda Oliver (2017) states that direct and indirect methods of NA may be applied to identify their needs. NA is not a recent concept in teaching or academia. Most researchers and teachers throughout the globe regard this method as a beneficial technique for course creation and improvement because it provides a framework for connecting individuals' current educational achievement with their prospective requirements. That is generally applicable for linguistic courses. The integration of students' ideas is a critical component of the need's analysis. On the other hand, Cuba and Lincoln (1985) offer employing interviews which are not structured in case the teachers have no awareness about their students. Focusing on these given points of views, I have made a decision to utilize both methods mentioned above (deductive and inductive) to collect information (data) like:

- ✓ unstructured interviews
- ✓ a questionnaire
- ✓ a test

Those can make the research more straightforward and help to know the learners' needs. This can be difficult to make prediction the resemblance of needs and wants of learners as they do not sometimes realize and differentiate the necessity for one particular skill's improvement. According to Flowerdew (2010), inconsistencies among students' Ws and Ns, were revealed after the questionnaire survey, it is obvious, anyone might be in an identical scenario.

The method of learner-centered NA form was initially proposed by Waters and Hutchinson (1987). The methodology divides NA into two categories: needs of learning and needs of target situation. According to

Munby (1978), the targeted scenario assessment is a collection of restrictions that have an impact on the development of the syllabi. These limitations include sociocultural, socioeconomic, logistic, administrative, psycho-pedagogical, and academic variables. "Needs," "shortages," and "desires" are examples of targeted objectives. As the assessment's main elements, the students were interviewed and given a questionnaire. Focused on their answers, it became straightforward to determine that they should develop communicating with people, comprehending the tourism related articles and texts as well as writing project works till the end of the semester. The collection of data assisted to design the course syllabus and content, put the real objectives to achieve outcomes and identify the evaluation types.

Both direct and indirect methodologies are employed, according to Long (2005). If the interviewee does not possess any information about the learners' needs, questions (unstructured) are acceptable. Various techniques for doing NA in ESP might essentially be considered as tools for collecting data with an anthropological focus. Investigations would consist of in-depth, ongoing assessments of the environment, focused groups, and examinations of the individuals' diaries writings.

In order to analyze the learners' needs in the acquisition of L2 (English), direct approach was implemented that included three steps (non-directing interview, questionnaires and writing an essay). A notably effective investigative study technique is a non-directed interview. Teachers can elicit interesting answers from their students because these are recognized for becoming highly spontaneous and adaptable.

Initially, the students of Tourism were offered taking the interview whereas taking into account their responses to discover and analyze the aim of studying in ESP in Kokand University. Secondly, a survey based on questions was employed to collect clear data. Lastly, an opinion essay (about the development of Tourism in their country and its influence to local people) was required them to write to analyze the students' awareness of strategies for writing and their points about the sphere of Tourism. While taking this non-directing interview, it became easier to check their speaking skills.

Data Collection. Chin's argues (1994) that considering a number of factors, it is challenging to apply NA to define a technique for acquiring information regarding educational prospects. First of all, it combines exterior demands and learners' preferences as though they are cohesive and does not consider them as potential areas of research. Secondly, it obscures the fundamental disagreements concerning curriculum issues which exist in educational practice focusing simply on the overall result of such emotion driven choices. On the basis of a concept of social insufficiency, it promotes the idea that teaching is a necessity to be fulfilled.

Therefore, to find out the students' needs, they are given questions in the part of interview. Next, for clarifying their wants, the students were required to complete a questionnaire. The diagrams are provided to show the target students' wants.

Figure I. How often do you speak English?

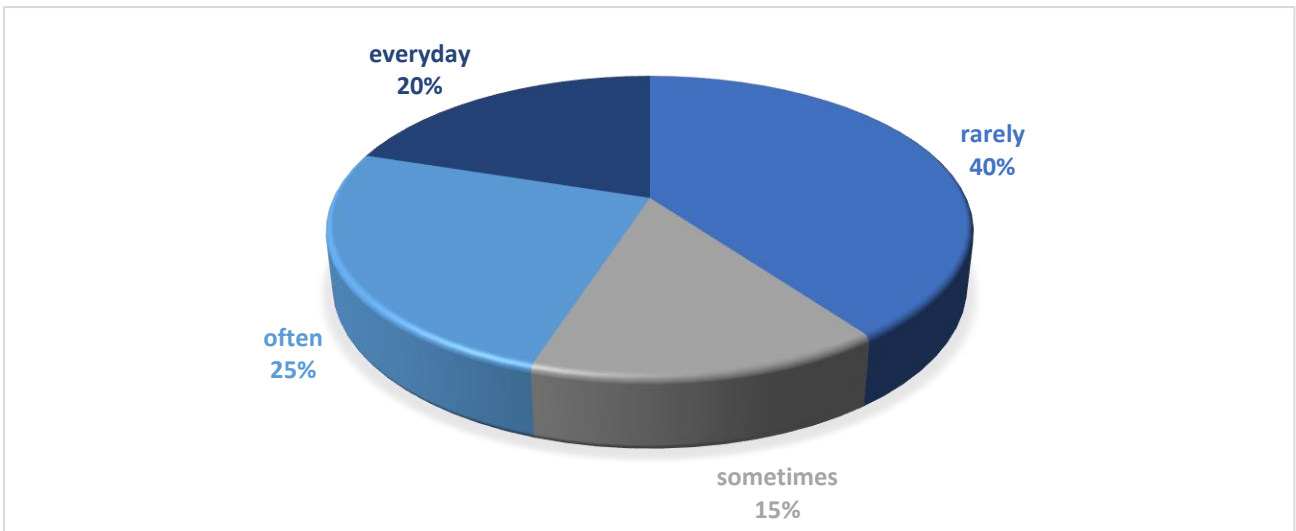

Figure II. What is your learning style?

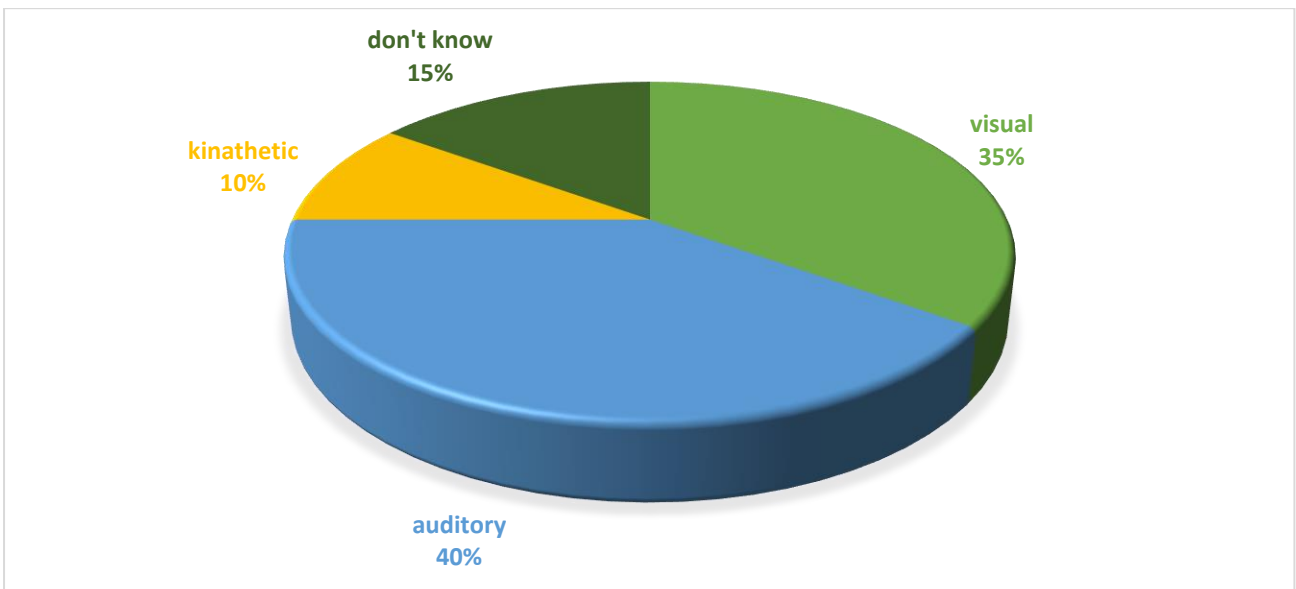

Figure III. What kind of tasks and activities would you like to have during the lessons?

Figure IV. What would you like to study this course?

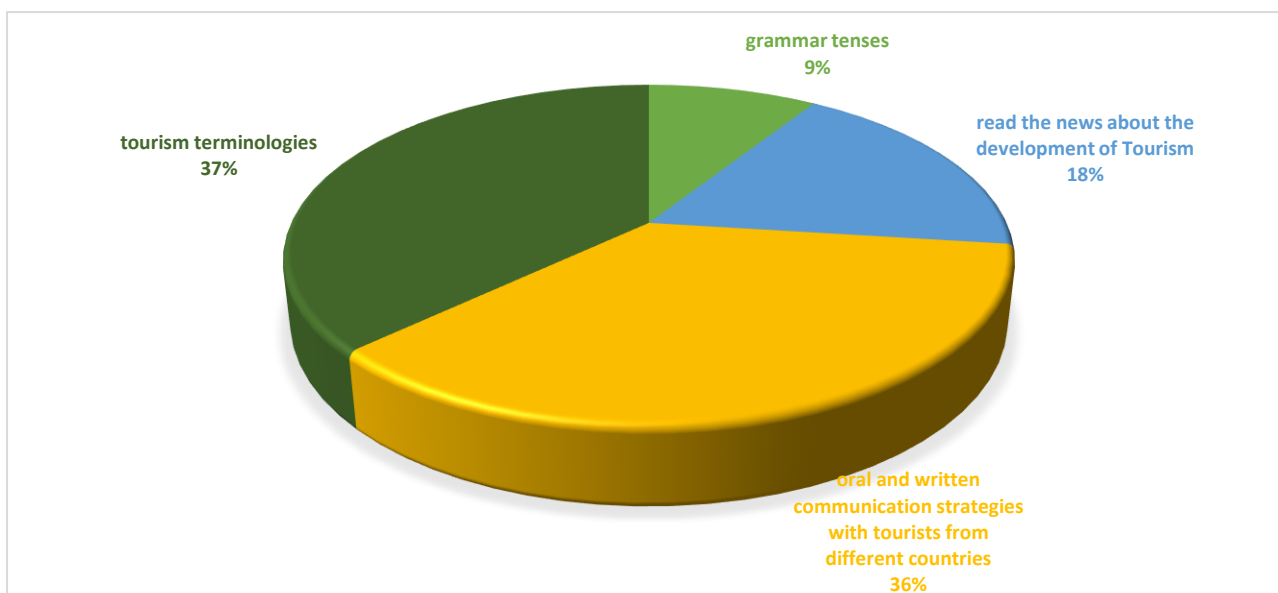

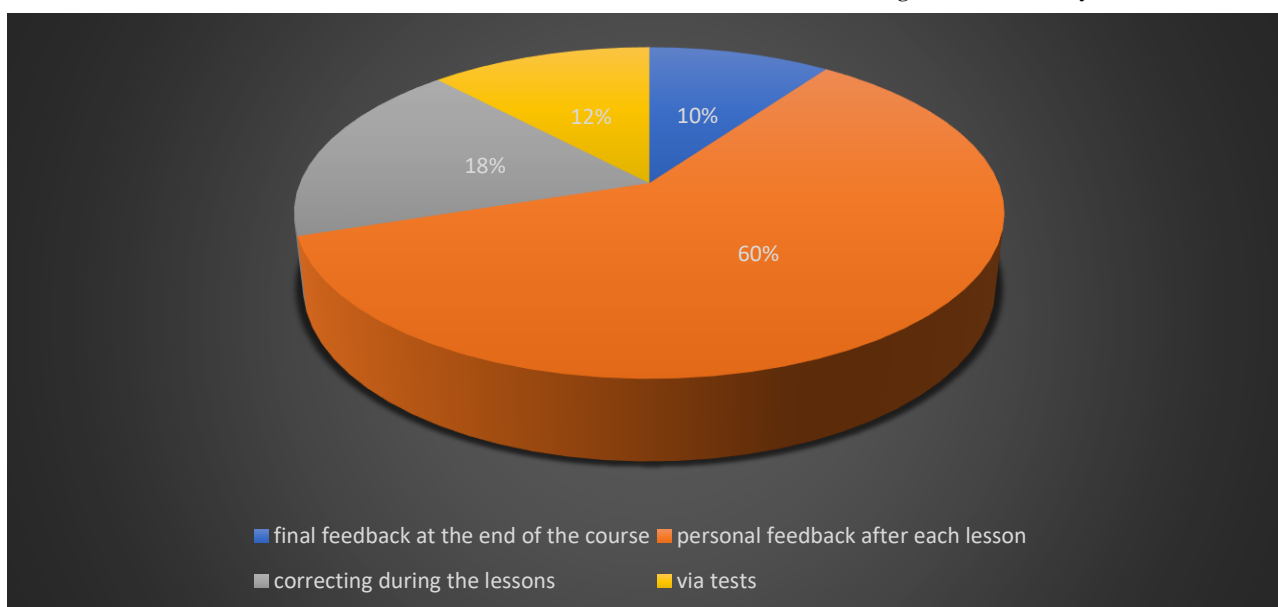

Figure V. How would you like to be assessed?

At the final stage, Tourism students wrote an opinion essay based on their field to identify their shortages.

Analysis and results. The collection of data assisted to reveal the shortcomings, desires and needs of target students. For exemplifying, through face-to-face surveys, it became obvious that the students never took any ESP lessons and they would like to have classes. Most learners only studied GE for entering the Kokand University and some of them acquired it for communicating or working in another country and the current level of the learners is B2 (CEFR). The majority of participants stated that studying L2 can boost their career development and offer a variety of work alternatives in future. Additionally, students should try to enhance their productivity, creativity and receptive abilities. While questioning regarding their linguistic problems, almost all of them said that they had trouble generating words for specific topics rather than just using broad phrases they were familiar with. Most stated that they strongly would like to express their thoughts in written form, but some of them said that it is difficult for them to comprehend people's speaking while communicating. According to the survey, everything was made clear that the majority of students possess preference of applying communicating in L2 (English) on a daily basis; this approach was used to highlight learners' actual preferences and expectations from future ESP program. Taking into consideration their learning style, appropriate materials like power point presentations and worksheets can be employed to instruct the learners. Significantly, in order to strengthen their HOT skills, CLT approach (working in pairs, group works) can be

utilized during the teaching process. Considering these types of tasks improve collaborative capabilities, students find them more engaging, and that can make instructors' jobs easier. As for the abilities of English language, the learners desire to acquire writing and speaking competencies to be developed with range of words related to the Tourism. Regarding to assessing, most of them selected individually given feedback contrasting with others (supplemented in questionnaire).

When it comes to writing part, it was clearly found out that the learners have challenges with implementation of complex sentences, linking verbs, and proper terminologies. ESP session can incorporate specific structured directions that focuses on teaching grammar rules including linking words based on the results of that investigation. Additionally, specific terminologies should be emphasized and practiced according to themes throughout each class. Those certain results can serve as a solid foundation for creating the lesson content for ESP. A common connection among instructors and learners may be achieved by carefully considering the interests, desires, and shortcomings of the participants.

Conclusion. In the aim of identifying target students' NWL (needs, wants, lacks) and designing productive ESP program for Tourism learners, an unstructured survey was taken. Considering the results mentioned above, main goals and objectives were intended to design ESP session more useful and effective in order to enable the students

- ✦ to employ proper words, phrases in communication as well as in written form
- ✦ to utilize accurate structure of grammar in making complex statements
- ✦ to think critically, analyze, supplement the solutions to given problems
- ✦ to express their opinions independently during the procedure of ESP course.

All in all, the findings of the research, the survey clarified the learners' needs in both linguistic competencies and future careers. After collecting the most significant information about the students of Tourism, it will be straightforward to decide the objectives and goals of the ESP, select the best technological tools and strategies or methodologies and create the content of the course which can increase the students' ambitions to accomplish successfully during the process.
